Software Engineer Intern- Backend & Full-Stack Systems (Java, Python), Distributed Systems | REST APIs, SQL

Education

Masters in Computer Science - University of Colorado Boulder - **CGPA: 3.65/4**

Aug 2025 - May 2027

Bachelors in Computer Science - SRM University - **CGPA: 3.92/4**

Aug 2021 - May 2025

Experience

Software Engineer Intern - *InfiniAI Technologies Pvt. Ltd. Hyderabad, India*

Sep 2024 - Nov 2024

- Engineered Python-based automation pipelines to optimize internal workflows, reducing data processing time by **30%** and improving operational reliability.
- Designed and implemented RESTful backend APIs using Python, enabling scalable integration with client systems and improving service reliability by **25%**.
- Collaborated on **three AI-driven production projects**, working closely with cross-functional teams to accelerate delivery timelines by **20%** while maintaining deployment quality.
- Built and deployed a full-stack company website using **Flask-based backend services**, ensuring clean backend–frontend integration and improving platform accessibility by **20%**.

Technical Skills

Programming: Java, TypeScript, Python, C/C++, JavaScript, SQL,

Backend & Systems: Spring Boot, REST APIs, OAuth 2.0, Scheduled Jobs, Data Pipelines, Flask, Django, Node.js, Express

Frontend: React, HTML, CSS, Next.js, Bootstrap, TailwindCSS, JavaScript

Databases: PostgreSQL, MySQL, MongoDB, AWS Aurora

Applied AI (Backend-Focused): LLM API Integration, Analytics-Grounded Prompting, Explainable AI Outputs, Guardrails for Hallucination Prevention

Software Design: Object-Oriented Programming, Design Patterns (Strategy, Factory), Modular Architecture

DevOps & Tools: Docker, AWS, Git, GitHub Actions, CI/CD, Makefile, VS Code API

Projects

SocialLens - Creator Analytics & Intelligence Platform | *Java, Spring Boot, PostgreSQL, OAuth 2.0, REST APIs*

- Architected a **modular Spring Boot backend** to ingest, persist, and serve YouTube creator analytics, separating concerns across OAuth, ingestion, scheduling, and analytics services.
- Implemented **OAuth 2.0 authorization and token refresh workflows** with secure persistence and failure handling to sustain access under token expiry and quota constraints.
- Built **scheduled background jobs** for daily channel/video metric refresh with idempotent writes and snapshot uniqueness guarantees to ensure consistency across retries.
- Designed a **normalized PostgreSQL schema** and REST endpoints for time-series metric snapshots, enabling historical analysis, efficient retrieval, and observability-driven debugging.

Creator Copilot - Analytics-Driven Intelligence Layer | *Java, Spring Boot, LLM APIs, REST, PostgreSQL*

- Designed an **intelligence layer on top of SocialLens** to translate persisted creator metrics into actionable recommendations grounded in channel and video analytics.
- Implemented workflows to analyze **retention trends, engagement drops, and publishing patterns**, producing structured insights instead of generic LLM suggestions.
- Built REST interfaces to serve **explainable recommendations**, explicitly exposing the metrics and reasoning used to derive each output.
- Added **decision reliability and guardrails** by constraining LLM responses to analytics-backed signals and rejecting ungrounded generations.

Zenco - Modular Developer Tooling System | *Python, TypeScript, OOP, Design Patterns, VS Code API*

- Designed a **plugin-style developer tooling architecture** separating analysis, transformation, and execution pipelines for clean extensibility.
- Applied **Strategy + Factory design patterns** to enable interchangeable analyzers/transformers without modifying core orchestration logic.
- Built a **Python CLI engine** and integrated it with a **VS Code extension** to run commands, preview diffs, and apply changes inside the editor.
- Delivered an **editor-native workflow** supporting iterative code transformations with predictable execution and minimal coupling between modules.

Publications

Computer-Aided Lung Cancer Diagnosis Using Deep Learning

IEEE Conference Publication, 2025

Developed and evaluated a CNN-based diagnostic system using transfer learning on lung CT scans, achieving **94% classification accuracy**.
